DVB-T USB dongle mods for HF 0 - 28 MHz reception by YU3MA

NOTES:

TR1 - Wideband RF transformer 1:4 (50ohm : 200ohm)
Use Mini Circuits T416T-KK81 for best performance or build width Amidon FT37-43 ferrite core, 5 turns trilinar winding.
Other high frequency cores can be used (example, from LAN magnetics). Wire diameter is not important.

C1, C2 - Remove (unsolder) from PCB

Cx - Add Tantalum capacitor 1uF / 16V

X1 - 50ohm RF connector
Low pass filter (LPF) for 30MHz or band specific filter (BPF) is strongly advised before connecting to HF antenna.
